

EXPERIENCE

Alackrity Consols Pvt. Ltd, Bangalore

Junior Software Engineer

07.2024 – Present

- Developed and maintained **scalable Django-based applications** handling complex, multi-module business workflows.
- Designed and optimized **high-performance MySQL schemas** for large-scale transactional systems, improving query efficiency and ensuring data integrity.
- Built and integrated **AI-powered features using LangChain**, enabling intelligent querying and automation across business modules.

SKILLS

Technical

- Programming- Python, Java, JavaScript
- Backend- Django, DRF, FastAPI
- Front end- REACT, HTML, CSS, Bootstrap, TailwindCSS
- Database Management- MySQL, Sqlite3
- DevOps & Version Control- Docker, Git, GitHub, BitBucket
- GenAI- LangChain, LangGraph, RAG Systems, Agentic AI
- Others- AWS, Pandas, Redis, Selenium

PROJECTS

- **Integrated Dairy Supply Chain Platform** *Django, React, LangChain, RAG*
 - Built a LangChain-based ReAct AI agent integrating MySQL and RAG pipelines to enable context-aware querying across complex supply chain workflows
 - Worked on an Integrated Dairy Solutions Unified Digital Dairy System for KMF, supporting large-scale cooperative dairy operations with Channel, Transporter, and Marketing modules aligned to real-world dairy supply chain workflows.
 - Designed and implemented a comprehensive pricing management system, covering bulk price slabs, promotional/offer pricing, channel-wise payment workflows, and crate management, enabling efficient milk and milk-product distribution via transporters.
- **D-Care Milk Procurement Website** *FastAPI, REST API, MySQL*
 - Designed and implemented a milk procurement system that streamlined farmer onboarding, milk collection monitoring, and real-time inventory management.
 - Built a secure, scalable backend using FastAPI and MySQL, implementing JWT-based authentication and role-based access control to support multi-role users in a production-grade environment.
 - Improved operational transparency and eliminated manual coordination by automating the entire supply chain workflow.
- **Prepaid auto booking** *Django, MySQL, Bootstrap*
 - Developed a prepaid auto booking and POS transaction management system for BMRCL, supporting multi-station operations across metro locations.
 - Designed and optimized relational database schemas for booking transactions, station management, shift tracking, POS devices, and employee operations using Django ORM and MySQL.
 - Built administrative dashboards for monitoring station-wise performance, transaction summaries, and operational analytics.

EDUCATION

- **B Tech in CSE** | Government Engineering College, Thrissur **CGPA: 7.75** | 07.2019-10.2023
Field of study: Computer science, Core Java, Database Management

CERTIFICATIONS

- **IBM RAG and Agentic AI** (Professional Certificate) 
Covered LangChain, Retrieval-Augmented Generation, Agentic AI design patterns, and ReAct agent implementation.
- **Python Web Development Expert** (National Council for Technology and Training) 
Focused on developing dynamic web applications using Python and Django and front end in REACT
